

Nicholas Eisenberg's Oral Exam

Thesis committee:

Le Chen

Erkan Nane

Jerzy Szugla

Xiaoying Han

Jimmy Hilliard

Parker Hall 328

2:00pm – 4:00pm, July 24, 2022

Auburn University

1. Le Chen and Nicholas Eisenberg.

Interpolating the stochastic heat and wave equations with time-independent noise: solvability and exact asymptotics.

Stochastic Partial Differential Equations: Analysis and Computation.

In press, 2022.

2. Le Chen and Nicholas Eisenberg.

Invariant measures for the nonlinear stochastic heat equation with no drift term.

In preparation.

3. Le Chen, Nicholas Eisenberg, Erkan Nane, and Alex Negash.

Global solutions for the interpolated stochastic heat and wave equations with a super-linear diffusion term.

In preparation.

1. Le Chen and Nicholas Eisenberg.

Interpolating the stochastic heat and wave equations with time-independent noise: solvability and exact asymptotics.

Stochastic Partial Differential Equations: Analysis and Computation.

In press, 2022.

2. Le Chen and Nicholas Eisenberg.

Invariant measures for the nonlinear stochastic heat equation with no drift term.

In preparation.

3. Le Chen, Nicholas Eisenberg, Erkan Nane, and Alex Negash.

Global solutions for the interpolated stochastic heat and wave equations with a super-linear diffusion term.

In preparation.

1. Le Chen and Nicholas Eisenberg.
